Dwight Look College of Engineering

International Programs Goals and Challenges

Dr. César O. Malavé
Associate Dean of Engineering
Associate Agency Director of TEES
Professor of Industrial and Systems Engineering
International Programs
Goals and Challenges

- Goal: 20% of engineering students (~1500) participate in international experience every year.

- One-week project-base design experiences

- Each academic department to identify courses in which we could add a one-week international design component – 100 students per department

- The design trip could be done in spring break, May or winter break

- We will continue to expand our current faculty-lead programs in Spain, China, Brazil, Mexico and Central America – 200 students
International Programs
Goals and Challenges

- We will expand our programs with TAMUQ – 100 students
- We will expand our REEP and Independent study abroad programs – 100 students
- We will expand opportunities for international internships – 50 students
- I will need approximately $1M in scholarships per year – I can do this!
- I will need, from this board, opportunities for the one-week design experience.
Thanks!!!
